PEAK TECHNOLOGIES

Thermal Managed Print Services

A unique modular approach - making printing easy and costs predictable, so you can focus on what you do best.

Why Managed Print?

Most IT managers will be familiar with MPS programmes for office laser printers, as this is a common programme that has been available for many years. But what if you could manage your fleet of thermal label printers in the same way? Well now you can!

With advancements in printer firmware and printer management tools, you can now configure and monitor numerous makes and models of thermal printers, no matter where they are located – from a single point of control.

Combine this with Peak Technologies' technical expertise, financing options and vast experience in thermal printing solutions, and you have a full printing solution over 3 or 5 years at a fixed monthly cost – with no hidden surprises! Peak Technologies' Thermal Managed Print Service programme is a modular programme to suit YOUR requirements. Pick the elements of the solution that add value to your business, and let us do the hard work for you.

Thermal printers
A wide range of industrial and mobile printers from many different brands, including all the top OEMs, with 3- or 5-year warranty packages which include all commonly replaced parts such as printheads and platen rollers.

Pre-discovery and audit
Our pre-sales engineers can advise on the best printing solutions for your operation, from your warehouse operations, through the entire supply chain. We never knowingly under- or over-specify, and will always recommend what YOU need.

Initial set up and annual maintenance visit
Carried out by one of our printer technicians, these are offered at NO extra cost as part of our thermal managed print solution.

Ongoing printer management and reporting tools
Using the latest software, you can monitor all your printers, wherever they are, and obtain a multitude of performance data which will help prolong the life of your printers, and help forward planning for redundancy and future replacements/upgrades – all from a single point of control.

Benefits:

With Thermal Managed Print Services from Peak Technologies, we take the guesswork, frustration and extra costs out of supplying and servicing thermal printers.

- Monitor printers wherever they are
- Fully tailored packages to meet your requirements
- Simplified business processes
- Reduced costs
- Optimised printer performance and extended lifecycle
- Best-in-class print consultants helping you along the way

Thermal Managed Print Services

A unique modular approach - making printing easy and costs predictable, so you can focus on what you do best.

Security

We can help you defend against security breaches, using a security assessment wizard, and lock down your printers to prevent accidental or unwanted changes to your printer settings. Updating your printers remotely to the latest firmware is also straightforward using cloud-based software.

Labels and ribbons

Peak Technologies has a team of consumables experts, who will recommend and supply all your label and ribbon requirements at competitive prices. This forms a key part of your solution, as good quality media will prolong the life of your printers, and Peak Technologies only supplies high quality products which have undergone rigorous testing to maximise printhead life. We will drop ship your consumables as you need them, and can even monitor your usage using the printer management tools, so we can deliver product only when you need it. Let us take away the worry of you ever running out of labels!

Sustainability

Helping protect the environment is fundamental to your business, and ours. We have several initiatives which can form part of our Thermal MPS solution, including:

- Linerless labels; these have no backing liner which goes into landfill
- Removing any old or unwanted printers, and disposing of them following the guidelines of the WEEE directive
- Planting a tree for every printer you purchase

You may also want to consider other elements to the Thermal MPS solution, including label printing software, printer trade-in and more regular preventive maintenance visits. In summary, please tell us what you need. We would be delighted to have an initial no-obligation call or visit with you, to establish your current printing challenges, how we can help improve your operations, and save money with a Peak Technologies Thermal Managed Print Solution.
